

1. What is LLM ?

Ans : **LLM** stands for **Large Language Model**.

It's a type of artificial intelligence (AI) designed to understand and generate human language. Models like ChatGPT are examples of LLMs.

In simple terms:

An LLM is a computer program that:

- Reads and understands text
- Predicts what words should come next
- Generates responses that sound human-like

Why “large”?

Because it's trained on **huge amounts of text data** (books, websites, articles, etc.) and has **millions or billions of parameters** (internal settings that help it learn patterns).
